

## **LIQUENT Announces InSight® for Registrations Express Edition**

**Horsham, PA – September 9 2011:** LIQUENT, Inc. the global leader in regulatory information management solutions and services, is pleased to announce LIQUENT InSight® for Registrations XPress Edition.

LIQUENT InSight® for Registration XPress Edition is the latest release of LIQUENT's regulatory information management platform. LIQUENT InSight® provides clients with global registration management and submission planning capabilities with a dedicated focus on enabling new efficiencies and ensuring worldwide regulatory compliance.

LIQUENT InSight® for Registrations Xpress Edition is Liquent's new turnkey Registration Information Management module geared toward mid-tier Pharmaceutical organizations. Xpress Edition is built using the robustness of LIQUENT InSight's configuration capabilities. The pre-built configuration sits on top of the standard platform enabling a mid-tier organization to quickly begin using the system capabilities. User Roles are pre-defined as part of the module. This allows organizations to assign the right set of functionality to a set of users based on industry best practices.

The pre-configured functionality gives organizations the essential capabilities needed for initial implementation of Registration Planning and Tracking. Because the module uses configuration and not customization, critical updates to ensure the system remains compliant are seamlessly maintained with upgrades. As organization needs grow, additional functionality can be implemented without having to go through a migration effort.

LIQUENT InSight's proven functionality that is included in the Xpress Edition includes:

- Standard Product Family and Country level security management
- Regulatory Event Planning, Tracking and Management including tracking of individual submissions (sequences)
- Product Detail Management (if licensed)
- Status update wizards
- Registration/License management – including sunset clause tracking
- Standard Querying

According to Rick Riegel, CEO at LIQUENT, LIQUENT InSight® was developed to provide a regulatory framework to help organizations gain and maintain market approval quickly and efficiently for products. The scalable software platform allows for global standardization of regulatory processes and activities while providing a single authoritative repository of harmonized data to make important decisions about your products.
